To the west, on the third hill, along the "beach," and in the small valleys, there is a different atmosphere. Here, in the Caquende, Boqueirão, Cortume, and Rua Nova (see map of town), there are no sobrados, no signs of former grandeur. The houses are of another style--small, one-story buildings with no air of antiquity about them. Some are made of brick, but most are of mud on a bamboo or mangue frame. Many have been coated with whitewash, some recently and some a long time ago. On the summit of this third hill, the Oiteiro, are the poorest houses of all, one- and two-room mud houses with thatched roofs. Recently in this section there have been some new-style houses built, tipo bangalo (bungalow-type), and there are signs of a growing prosperity among a few enterprising people. These areas of fishermen, of small storekeepers, and of those with crafts such as carpentry, bricklaying, and shoemaking, are the most heavily populated parts of the town of Vila Recôncavo today. According to the old inhabitants of the town, this section was undeveloped sixty years ago, and, to the old people, Vila Recôncavo is still up there on the hill, in the area of the sobrados. Nevertheless, the majority of the stores are in the lower part of town, which even has its own chapel. It is here that the children play although they must go up the hill to school. It is here that there are groups of men gossiping and having a drink of rum. It is here that an attitude of open friendliness prevails, and there are friendly faces at the windows. It is here that the drums beat when the African gods are feted.

The post office, located in the upper part of town, also has a telegraph. Messages go by special telephone to the nearby town of Centro, from where they are sent by wire. There is also a public telephone in the town which has two extensions, one in the house of the mayor and one in the house of the doctor. Other people must go to the telephone office to make or receive calls. The telephone is very uncertain; not only is it frequently impossible to get a call through but often nothing can be heard once the connection is made. From the town it is possible to speak through Centro to Salvador. It is also possible to speak to the sugar factory, and through its switchboard to several of the sugar plantations.

In recent years electricity has been brought to the town, and, in addition to lights on the streets, 78 of the 408 buildings in town have electricity. Of these, twenty-one have radios, and three have electric irons. Only the doctor, the health post, and the bar have refrigerators.

443 diers (ambulantes) who walk through the area in the summer selling combs, ribbons, jewelry, and perfumes.

561 One of the most important factors influencing the fortunes of
565 the town of Vila Recôncavo is the diversity of attitudes toward
369 it held by different segments of the local population. The most powerful group, although small in number, is that of the plantation and sugar-mill owners. The orientation of this group is polarized between the capital city, Salvador, and the plantations. There is no one living in the town who is included in the same social stratum as these people, and therefore the town is not a social drawing point for them as it might be in the plantation area of the southern United States. Vila does not represent a shopping center for them, and it is not an outlet for their sugar. Since they are so near the capital, business is transacted there rather than in the small rural town with its poor communications. This group as a whole looks upon the town as a decadent and backward place. There is little or no feeling among these people that they should "do something" to improve the town, to which they feel little or no allegiance. Rather, their allegiance is first to Bahia and to their own social class in the state, and second to the Recôncavo, the original seat of that class.

The plantation and sugar-mill workers also disregard Vila to a large extent, generally not considering it worth the effort involved in getting there. For these people the market in Centro and the sugar mill store are the major attractions of the area. Their social life is centered almost entirely within the plantation or at the sugar mill.

The town dwellers themselves have an ambivalent attitude toward their town, for, while they also feel that Vila is backward and without opportunity for personal advancement, they
369 nevertheless consider themselves an urban group in contrast
• 365 to the plantation workers. Recent improvements in the town, such as the installation of electricity and the introduction of radios, movies, and other electrical appliances, as well as the pavement of the mud streets with cobblestones, have been a great help in alleviating the former forlorn air of the town, once known as the "abandoned" town. The local population still
[652] speaks of this earlier state a great deal, almost with the haunt-
[653] ing fear that such conditions might return. The funds for these public works came from sources outside the county, that is, from grants of money by the state government during the epoch of the interventores, the governors appointed during the dic-

369
365
653
[652]

tatorial regime of Getulio Vargas. One of the last of these was a son of the county who wished to leave a permanent remembrance of his family in the town. Most of the work was done by local labor, which brought a certain measure of prosperity to the town. Certainly the appearance of the town changed. New façades were added to many houses; others were freshly painted in gay colors; and some people constructed cement sidewalks in front of their homes. At night the streets are brighter because of the electric street lights (which are turned off at midnight) and because of the rays of bright electric light passing through the cracks of the closed window shutters and doors.

365
369

Almost every evening at dusk, however, the electric power of the countryside is shut off for at least an hour because of inadequate generating facilities at the main plant, leaving the countryside and small towns in darkness. At this hour the town returns to its past, and one seems to be in an era one, two, or three hundred years ago. Tiny oil lamps (fifós) are lighted, or an occasional kerosene lamp, the soft and short-reaching rays of which barely penetrate the heavy darkness of the house and do not reach the street. A hush falls over the town during the spell of darkness. All the old fears of shadows, malevolence, and lobishomens (werewolves) return. The family congregates in one room, for no one wants to be alone, speaking softly as though not to break the spell. The streets are suddenly emptied, and the silence is broken only by the occasional forlorn braying of a donkey left wandering outside.

[416]

Without light there is no life in Vila Recôncavo. The evening religious service is delayed; the movie is delayed; the bar closes. One thinks of the impermanence of the new prosperity, remembering how quickly the moist salt air can blacken the gayest colored building, how the heavy rains can wash away the foundation of a mud house, how fast the weeds can grow in the cracks of the pavement, and how by the flick of a switch in some faraway place the magical lights are removed. A heavy gloom settles over the town and remains until, as suddenly as they went off, the lights return. Life picks up again, radios blare forth at fullest volume, and Vila Recôncavo once again is grateful for light and life, however impermanent.

814

Although this is a traditional area, few local people know its history. Only a few can provide historical data going back further than one generation, and even fewer know anything of what lies behind the "glorious past" of Vila Recôncavo, a

lending money or even giving some to the overseer. Some of the members of Class B even acquire property in Salvador or in Centro, such as a house or houses which they may rent. It is the possession of this material wealth, plus the position of responsibility and authority, the greater proximity to the owner, and the invariably legalized status of the man's family which distinguish him from those below, placing him in a class by himself. In the case of the higher-placed white-collar workers of the factory, education is also important.

In material possessions other than those already listed, Class B differs considerably from the other two classes, having much less than Class A but much more than Class C. Their houses are always better and larger than those of the workers, and they usually have electricity supplied by the plantation. They generally have complete sets of manufactured dining and living room furniture, better bedroom furniture than the scanty belongings of the workers, china, rather than the clay dishes (nagé) of the workers, and table service for as many as a dozen persons. Usually their clothes are better and more numerous. Overseers are well known for their use of khaki coats, shirts, ties, and riding breeches, their well-polished leather boots and their felt hats, in contrast with the more informal sports clothes of the landowners and with the ragged, tight trousers and shirt and the straw hat of the shoeless rural worker.

Class B in the town of Vila Recôncavo is represented by Group 1 as described in the preceding chapter, with a few exceptions such as the minor municipal employees and a few of the smaller-scale merchants and lower-rated petroleum workers. Because there are no representatives of Class A in the town, Class B represents the top of the urban social scale. It is a class which has long existed in the town and which has always been composed of more or less the same occupation groups. For the most part, members of this stratum live on the hill which constitutes the old part of Vila Recôncavo, and seldom go down to the newer section. There are fourteen persons residing in town, plus their eight children, who are considered pure Caucasoid; they are all members of this local upper class. Three of them are foreign-born Franciscans who do not participate in much of public life once their official duties are completed. The others are brancos da terra ("whites of the land," a term which will be explained later in this chap-

from the competition of other sugar-producing areas. Abolition was the factor which, in many cases, simply ended a struggle several decades old.

The overall production of sugar in the Recôncavo was already dropping noticeably at the time of abolition, and it continued to decrease afterwards. At the end of the last century, state-supported *usinas*, or large mechanical factories for milling sugar cane, were opened in an effort to stimulate sugar production. At the same time, various other *usinas* were opened by private capital. These central mills received and processed the sugar cane of many plantations. The *usina* had the advantage of freeing the planter from the worries of milling and marketing the sugar, allowing him to concentrate on higher production of sugar cane, while the mechanized *usina* was able to produce more sugar out of the cane, thus increasing production. This system of sugar production proved relatively lucrative, and the government *usinas* passed into private hands. The owners of *usinas* bought as many neighbouring plantations as possible, and in this way the *usineiros*, as they were called, became at the same time the mill owners and sugar-cane planters—employers of factory workers and of agricultural workers. The plantations which did not pass into the hands of an *usina* became *fornecedores*, supplying cane to one or another large sugar mill.

The *usina* system, however, in many respects did little to change the traditional plantation system. The plantations belonging to *usineiros* continue as separate units; each generally had an administrator, a man responsible to the *usineiro*, who is in charge of the plantation. As a rule the administrator, who is an employee of the *usina*, lives in the old *sobrado*, the former residence of the *senhor do engenho*, as the old plantation owners were known. The workers on the plantations and their families frequently still live in *senzala*-like houses, usually a long narrow building under one roof divided into separate apartments of two or three rooms. Despite many changes of technology, many examples of the old and the new exist side by side on these Recôncavo plantations. On the same plantation both mechanical tractor and ox traction may be used to pull plows. There are workers' houses side by side, one with electricity and a radio, and another using candles and kerosene lamps. Furthermore, the hierarchy of workers and specialists in sugar-cane raising persists little modified from the early nineteenth century. There are the field hands, the ox-cart drivers, the artisans and other specialists. The plantation is also approximately the same size as it was in the early nineteenth century (although several may be the property of one company nowadays) and it has about the same number of hired workers as it had slaves before.

But the *usina* system and other outside influences have made for many fundamental changes in the Recôncavo. In the very large

249
178
466
[464]

In the very large *usinas*, the mill hands and even the field hands are modern industrial workers. They are employees of a large industrial corporation and are protected at least theoretically by the labour laws of the nation. The highly personalized relationship between the plantation workers and the owner-administrator of his own plantation, which persisted from the slave era, has been replaced on the larger *usinas* by the impersonal employee-employer relationship of the modern industrial age. Today, modern plantations and small towns have electricity; there is modern housing for workmen; the State and even the sugar companies provide medical aid; there are primary schools both in the small towns and on many plantations; recreation facilities are found in the towns and provided by the *usinas*; and the sugar-cane experimental station situated in the area constantly urges fertilization of the land and modern techniques and methods of sugar-cane production. But the older and more traditional patterns exist side by side with the new, and each of them influences the relations among the racial groups of the zone.

III. Vila Recôncavo is a small town on the Bay of All Saints. The rural area around it, which lies within the social and economic orbit of the town and which is the unit under consideration, comprises some 80 square kilometres, or slightly less than half the entire area of the county of which the town of Vila Recôncavo is the county seat.[1]

[423]
[634]
[504]
[487]
[438]
[162]

It this area there are 14 plantations, three of which nowadays plant very little sugar cane. Parts of the town itself are built on the land of one of these plantations, and the rest of the town area is owned in small lots by private individuals or by the Church. Although Vila Recôncavo is the county seat, local goverament is the only important function which it fulfils for the surrounding area. It is not used as a shipping point, either for receiving supplies from the outside or for sending sugar to the outside. *Braços do mar*, or inlets of the bay, go to many of the plantations and are deep enough for the *saveiros* (shallow draft sailboats) used on the bay for transport. Many of the plantations have direct connexion with Salvador. Commerce in Vila Recôncavo is almost entirely limited to supplying the 1,462 inhabitants of the town and of some small islands and of one community near by which is not devoted to sugar production. It is not the major supply source even for these groups which live near enough to another and far larger commercial centre where they prefer to do their marketing. The *prefeito* or mayor of the county is rarely a resident of the town itself. Rather he is usually a planter of the surrounding area. He goes into town to do municipal business,

634

[1] Both the town and the county bear the name of Vila Recôncavo.

[SALVADOR]

/18 cont./

829 The irregularities and inadequacies of electric service in
• 365 the city are attributed by many inhabitants of Bahia to what they call the "contempt of the Americans for the well-being of the people," as if the Americans were the only ones responsible for the operation of the American-Brazilian enterprise that produces electricity for the region. Everything that is or is supposed to be American otherwise enjoys great prestige. There is, how-
829 ever, a foreign group against which (or, more precisely, against
*563 the hidden "trust" that it represents) there exists a very strong
578 hostility, although it manifests itself only on certain occasions.
[443] It is a matter of emigrants from Spanish Galicia, accused of exploiting the populace owing to the monopoly that they have acquired in the grocery and bakery business. At certain times when ten-
[152] sion is particularly strong, as in 1930, and following the rapid
[458] rise of the price of commodities of prime necessity at the be-
[579] ginning of the last world war, the populace gave free vent to its discontent by plundering certain Spanish business establishments. But the attitude of the Bahians toward the person of these immigrants is free of lasting animosity, and marriages between the two
[261] groups are frequent. The fact remains, however, that the population attributes to the Spaniards the shortage of certain food commodities, especially bread, and it accuses these emigrants of "enriching themselves off of the misery of the people."

529 The recreational associations of the English, Spaniards,
*563 Syrians, and Lebanese are frequented by Brazilians. Likewise
575 the hospitals maintained by the Portuguese and Spanish colonies
743 are managed by Brazilian doctors and receive numerous patients from Bahia, white or colored.

795 The religion of the Catholic majority is traditionally much
771 more external and ritualistic than dogmatic, the religiosity of a large number of those who call themselves "strict Catholics" being chiefly theoretical. This must have constituted a serious difficulty for the clergy; it is also a subject of astonishment for the visitor who imagines that he will come in contact with "the most
798 Catholic of Brazilian cities." The antagonisms between religious
621 groups are also moderate in this domain and /19/ never affect the
